

Biology

A High School level Biology class. This class is for high school freshmen and older. We will meet on **Mondays, from 8:45 to 10:15**, beginning on September 12, and each week we will have both class time and lab time. The students will be dissecting a frog, a crayfish, a perch, and an earthworm during lab, as well as observing slides under a microscope.

The cost of the class will be **\$45.00/month/student** plus a one-time **lab fee of \$16.00**. This fee is for dissecting specimens and a dissecting kit, to be shared between two students. We will be using a book entitled Exploring Creation with Biology, Second Edition, by Dr. Jay Wile and Marilyn Durnell, as well as the solutions and test book that goes with it. The ISBN numbers are 1-932012-54-0, and 1-932012-55-9. The books are available from Christian Book Distributors at 1-800-CHRISTIAN, or Christianbook.com. The set costs \$59.49, or if you already have the book, the solutions and test book alone costs \$16.99. If you already have a dissecting kit, or if you have a microscope we could borrow, please let me know.
